

# Managing Enterprise Technology Blind Spots

## SUMMARY

The influx of technology, combined with mobile, cloud, and hybrid workplace dynamics, are challenging conventional enterprise technology management capabilities, including enterprise IT asset discovery, lifecycle management, and security controls. The *Managing Enterprise Technology Blind Spots* survey examined how enterprises are governing technology, the operations issues and business impact they are experiencing, and where they intend to make investments.

## SURVEY FINDINGS

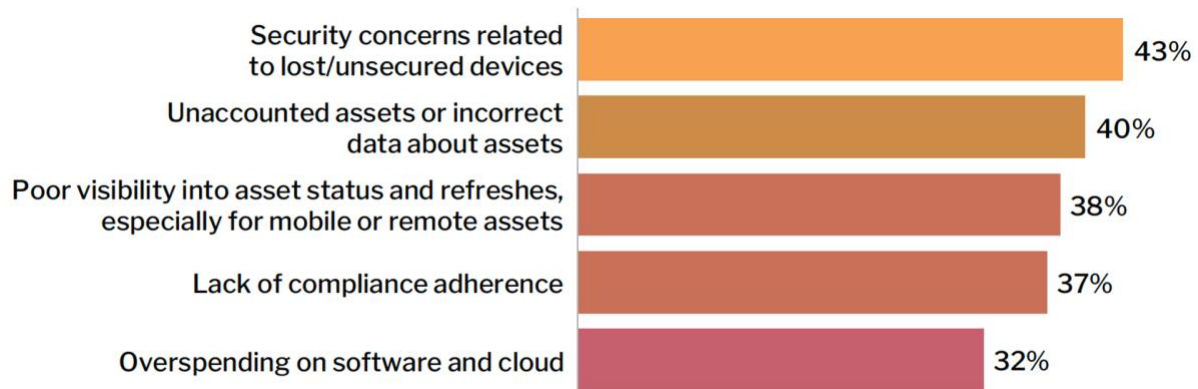

How many endpoints are you/your organization managing?

Is your organization having to use multiple systems to find data about different technologies?

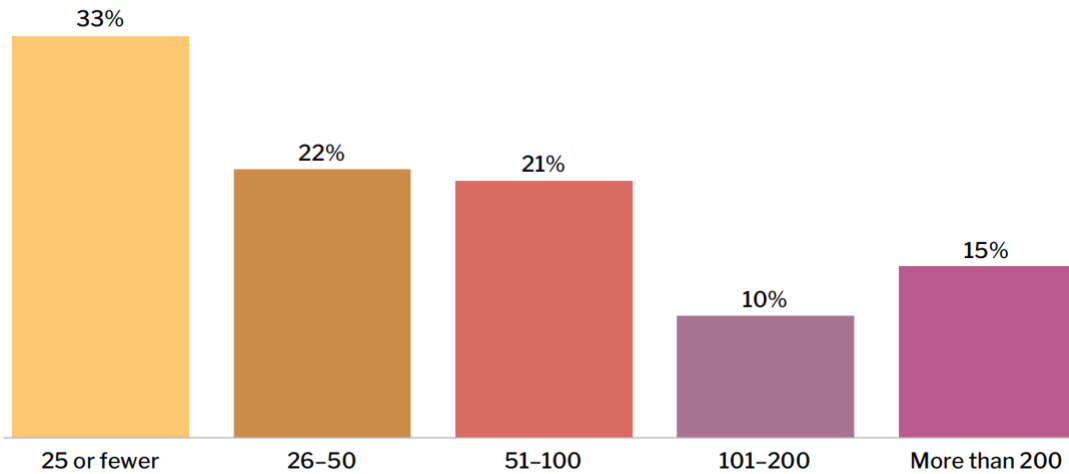

What challenges are your organization experiencing with managing technology?

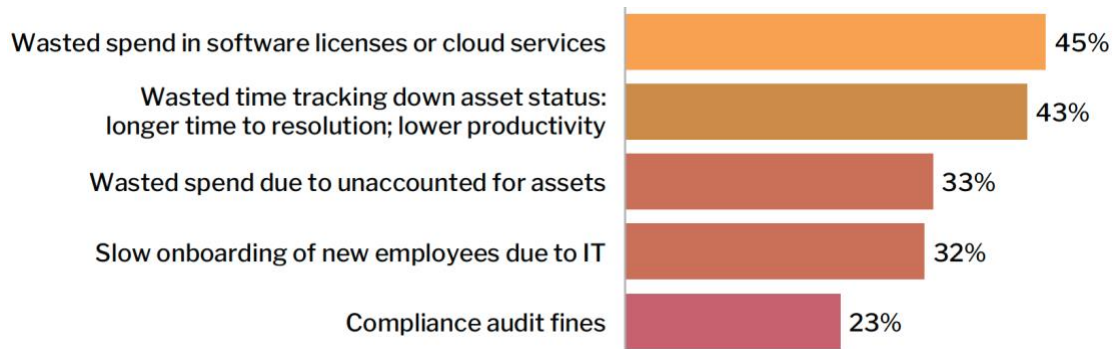

# Managing Enterprise Technology Blind Spots

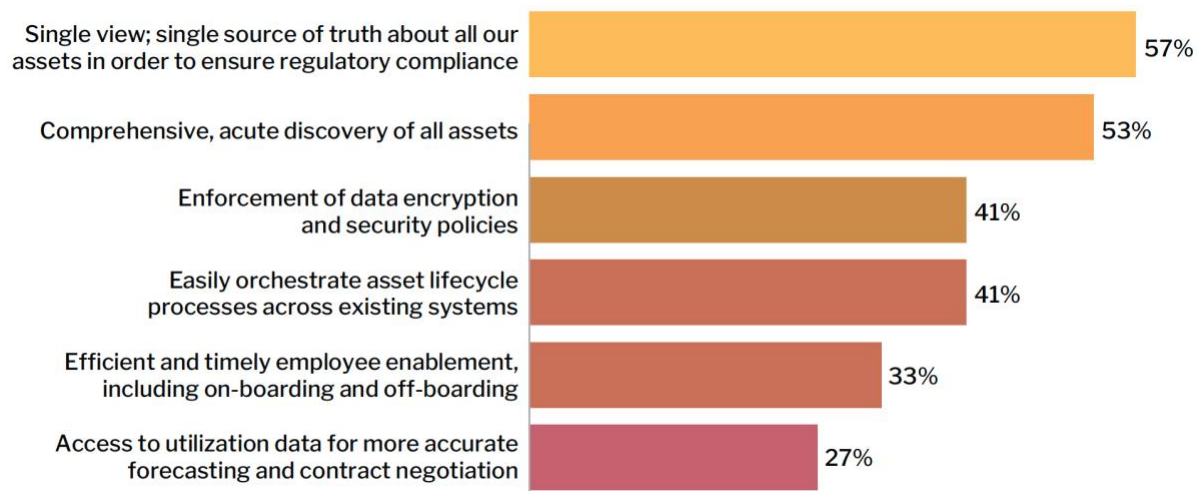

How many SaaS applications does your organization use?

What are the financial/business impacts of your technology management?

What capabilities are needed to improve technology management in your organization?

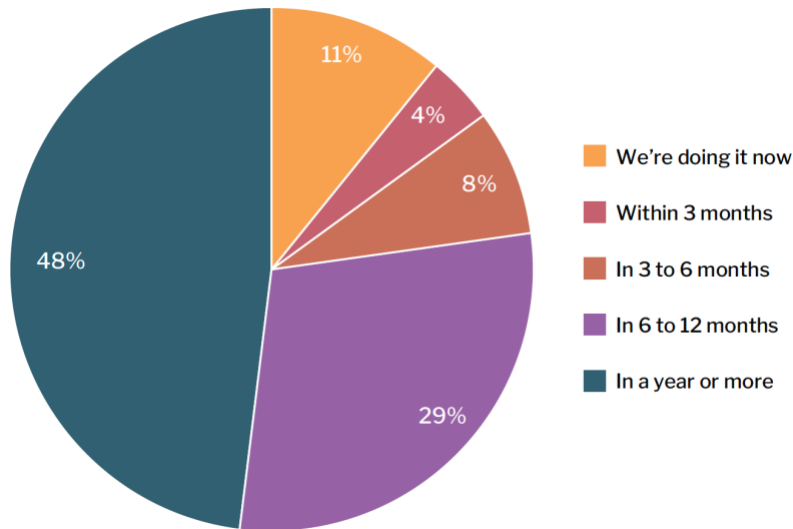

# Managing Enterprise Technology Blind Spots

Is your organization experiencing increased risk of security breach and associated costs?

When do you expect to take corrective action / re-evaluate your approach to technology management?

## RESEARCH

The survey was conducted and compiled in Q1-2022 by [Gatepoint Research](#). The research was based on surveying IT leaders from 100 enterprises of more than 5,000 employees across industries in the United States. The respondents comprised executive (40%) and management (60%) levels. Over half the survey respondents are responsible for managing more than 5,000 endpoints in their company.

## SPONSOR

Oomnitza offers comprehensive and automated Enterprise Technology Management solutions that unify visibility, insight, and control across users, endpoints, software, infrastructure, and cloud. Our SaaS platform, with built-in best practices and no-code workflows, allows customers to correlate asset inventory,

orchestrate lifecycle processes, and ensure policy compliance. We help some of the most well-known and innovative companies optimize expenditure, mitigate cyber risk, and ensure user experience. Learn more at
